

It has come to my attention that NAB (National Association of Broadcasters) are trying to lobby congress to have Satellite Radio (XM Radio) to stop doing traffic and weather. I am a listener of Satellite radio. I got it because here in the California. FM radio station programming is awful .I am a commuter like most of Californian?s, I drive Hwy 74. There are a lot of accidents on the highway. Having good traffic reporting is import to me. FM radio does not work on that road. You can pick up AM but the traffic reporting is only Los Angles country. I need to here South Orange County. I know from personal experience that Satellite Radio Traffic does cover Hwy 74. When on a drive home the Highway came to a stop. So I turn to XM traffic to see what happen. 15 minutes after a turn it on I have found out there was an accident on the road.
So Please oppose HR 4026

John P. Haro
